

PUZZLEBOMB

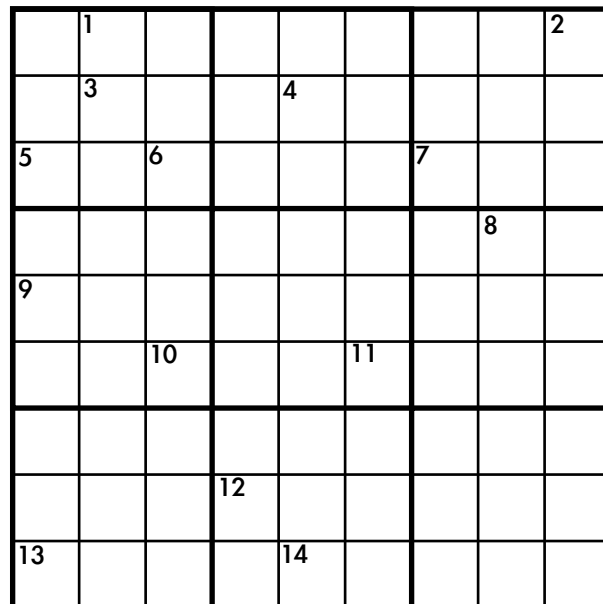

SHIKAKU

- Draw squares on the grid so that each numeral correctly indicates the number of squares inside which it lies.
- Squares may be any size but no two squares can share any section of line. Every square must contain a numeral.
- When overlapping squares form new squares, these new squares need not contain numerals, but count towards totals.

SHIKAKU: invented by @andrew_taylor.

The grid is a Sudoku in nine letters. The clues will help you work out what the letters are. 9 across is unclued (9).

ACROSS

- Where the beast rests (4)
- Herb (3)
- Commercial vehicle (3)
- Japanese chimera (3)
- Bright and centrally located (3)

Each clue contains a definition of the answer and a jumble of the answer straddling a space between two words. Of the remaining words, one from each clue is similar in meaning to one of a set of thematic names. Five of the entries (starred) must be entered jumbled. A thematic item, doubled and hung, determines a transformation which must be applied to the grid, revealing an appropriate message (15 letters), which should be highlighted.

Across

- 1. Was victorious despite silly miscalculation with bishop (3)
- 3.* Retiring alongside hard-hit workmate (4)
- 5.* Bones found in Tenerife sand dune (4)
- 6. Song made fair Alice sniffly (4)

Down

PUZZLEBOMB

The fates of this family are controlled by their genes, which are each labelled by one of 8 distinct prime numbers. Each person has a pair of genes, inheriting one from each parent, and have no prime gene in common with their siblings.

Their age of death is precisely the product of their prime genes, never living more than 120 years, and in each of the six (adjacent) pairs, the women (circles) outlive the men (squares).

Can you work out how long each member of the family lived?
