Water flows into the top of this grid, which contains nine pipes running from top to bottom, always flowing horizontally or downwards. Whenever pipes cross (at right angles), there's a visible bulge in the cover you can see. Every other grid square has one pipe, either running straight, or making a 90 degree turn. Reconstruct the grid.

This puzzle is actually three puzzles.

First you must solve a Sudoku puzzle using the numbers - filling the grid so each row, column and 3x3 box contains the numbers 1-9 once each.

Then use the numbers in shaded cells to solve a Shikaku puzzle - partition the grid into square or rectangular boxes, each containing one number which is the area of that box.

Finally you must use the outlines of boxes from the Shikaku puzzle and the outside labels to place a 45° diagonal mirror in one square of each box, so that the lasers emitted by the lettered rectangles into the grid bounce off the number of mirrors given before reaching their targets. Both sides of the mirrors are reflective.

CRYPTMAS

CRYPTMAS: by
@christianp

The wordsearch grid contains some Christmas words. Clues run either left-to-right or top-to-bottom. BUT: they've been encrypted! For each clue N+1, the grid is Caesar encrypted using the first letter of clue N as the key. Encrypting using A doesn't change anything, B shifts on by 1, C by 2 and so on. For example, the first row of the grid when decrypted with the key EXAMPLE would all be shifted by 4 letters, since they're all encoded with E:

L M E Q F M W E R R B

The first clue is "CHRISTMAS". Find the next clue, and the next, and so on until you find CHRISTMAS in the grid. As a bonus, each clue has a RED HERRING somewhere else in the grid.
